ALSTRACT

Fiscal year 1982 was transitional for the Appalachian Regional Commission (ARC), as it was the last year of the broad economic development program and a year of reduced funding and new limits on programs. In 1981, .Congress had requested that ARC prepare a pla: for completion of the Appalachian highway system and for a 3 to 5 year ARC finish-up development program. Activities under the last year of the traditional program included highway construction, a survey of local development districts (LDDs), the Alabama basic skills improvement program for elementary schools, and a Mississippi pilot project to upgrade training and development of vocational education teachers through inservice training. The finish-up program, begun at the end of fiscal 1982, included completion of 666 miles of highway, a regionwide jobs and private investment program, a health program for areas lacking basic health care or having high infant. mortality rates, and a special program to aid the 67 most distressed and underdeveloped Appalachian counties. ARC received funding of \$155 million for fiscal 1983. Report sections discuss objectives and activities, finances, and projects (by category); provide maps,. county population change data, and program categories and funding for the 13 Appalachian states; and include an address list and map of Appalachian LDDs. ## A Year of Transition

In the last days of fiscal year 1982, President Reagan appointed and Congress confirmed Winifred A. Pizzano as federal cochairman and Jacqueline L. Phillips as alternate federal cochairman of the Appalachian Regional Commission.

The year had been one of transition for the Commission, a fact recognized by Ms. Pizzanc at her Senate confirmation hearing. It was the last year of the broad economic development program the Commission had been executing since 1965. It was a year when ARC funds were again reduced, and the Commission adopted new limits on its programs. After describing the Region's progress and present conditions at her confirmation hearing, Ms. Pizzano said, "The challenge before the Commission is to deal... efficiently with these and other problems while the federal role changes and funds available to ARC are limited."

Fiscal year 1982 was also a year when the economy of the Region, which had for years been on a steady uphil! climb. shuddered before signs of national recovery began to appear.

### A Difficult Period for the Region

Recession was nore intensified in parts of the Region than in the nation as a whole. Appalachian unemployment in September 1982 was 12.4 percent, well above the national average of 9.7 percent but parallel to that in cities and towns with similar industrial bases. Moreover, in 27 Appalachian counties the unemployment rate was 20 percent or worse, and in one—McDowell County, West Virginia—it had risen to 32 percent.

e Appalachian economy was suffering more
the recession than other parts of the nation

for several reasons:

 The Region has a relatively large percentage of workers in manufacturing, one of the hardesthit sectors of the economy, with heavy concentrations of workers in textiles and apparel, industries related to automobile and steel production and industries dependent on the construction industry, such as furniture, lumber and wood products and primary metals.

 Coal plays an important role in the Appaladrian economy, and the coal export market has recently been seriously affected by the world oil glut, the world recession and other factors.

 Many of Appalachia's industries, such as iron and steel, lumber and wood, and apparel, are especially sensitive to competition from foreign imports.

#### The Finish-Up Program

The Administration proposed in 1981 that the ARC highway program be transferred to the Department of Transportation and that the nonhighway programs be ended.

Congress, however, responded to a request from the Appalachian governors for more time to finish up the ARC economic development mission. Continuing resolutions (P.L. 97-51 and P.L. 97-85) and regular appropriations legislation (P.L. 97-88) provided \$100 million for the ARC highway programs in fiscal year 1982 and \$50 million for the nonhighway programs of the Commission.

This funding was significantly below that of previous years, but it kept ARC intact while Congress and the Administration considered the future of the Commission beyond the expiration of its authorizing legislation September 30, 1982 (P.L. 96-506).

In appropriating ARC funds for fiscal 1981, Congress had requested that the Commission prepare a report suggesting "a plan for the completion of the Appalachian highway system" and for "a three-to-five-year ARC area development finish-up program." Over a period of months, details of a finish-up program that would satisfy this request and provide the best use of the limited federal resources available were worked out

among all the interested parties: the Commission, the Appalachian states, the Congressional committees concerned with ARC legislation, local development districts and other local bodies and officials, and round-table groups of businessmen.

At hearings held in the Region and on the Hill, the Appalachian governors reaffirmed their support for an independent ARC, of which they were members, and its partnership approach to economic development.

In December 1981, the response to the Congressional request was ready. "A Report to Congress from the Appalachian Governors Conceming the Appalachian Regional Commission," transmitted to Congress on December 31 and described in detail below, proposed major changes in the Commission's highway and nonnighway programs: that only the highest priority uncompleted segments of the planned Appalachian Development Highway System be constructed with ARC funds and that the area development activities be limited to three areas-a regionwide jobs and private investment program, a health finish-up program in sections of the Region still lacking basic health care or having high infant mortality rates, and a special program to aid the long neglected, most distressed. Appalachian counties,

The report also proposed several policy changes. It set goals, dollar ceilings and time limits for all ARC programs. It limited ARC funding to a maximum of 50 percent for nonhighway projects. (In March 1983 the limitation of 50 percent was waived in the case of the distressed county program due to Congressional recognition that the requirement in these counties, where local matching funds were scarce, would eliminate many needed projects.) For the jobs and private investment program, the major part of the area development program, involvement of the private sector would have to be demonstrated for each project funded.

The report also proposed that an Appalachian foundation be established to "strengthen the public-private partnership needed to attain our ultimate objective; an Appalachia fully in the

2

mainstream of the American economy."

The House and Senate subcommittees responsible for ARC legislation held hearings in the spring on the proposed program. When the House Subcommittee on Economic Development of the Public Works and Transportation Committee visited Huntington, West Virginia, in January 1982, Governor John Y. Brown, Jr., of Kentucky, then ARC states' cochairman, testified on behalf of the Appalachian program, reminding the subcommittee that the year before "every Governor, all 13 of the Appalachian group, said it was the finest Federal program that they had ever had a chance to participate in at the State level."

Later in the spring, Governor Lamar Alexander of Tennessee testified before the Senate Subcommittee on Regional and Community Development of the Committee on Environment and Public Works that: "there is not a program that I know of in the Appalachian Region that is more popular with the Governors."

In all, 5 of the 13 Appalachian governors testified in support of the program, while local elected officials and private sector leaders from Appalachia also gave their recommendations on various aspects of the proposed program.

Meanwhile, the Commission undertook several initiatives to begin the transition to the modified program so that it could get under way at the beginning of fiscal, 1983. At a governors' quofum meeting in July, the Commission passed a resolution setting policies to implement the three-part nonhighway portion of the program. This resolution specified the funding criteria for investments under the jobs and private investment, health finish-up and distressed county programs and described the types of projects that each could fund. In addition, it approved the list of counties eligible for the health finish-up and distressed county programs.

By the end of the year, a bill extending ARC's area development program for five years and its highway program for eight had passed the House by a 3-1 margin. A bill extending ARC for one year was unanimously passed by the Seriate. The Senate, however, declined to take up full authori-

zation of this finish-up program. The two bills did not go to conference. ARC was continued in operation into fiscal 1983, however, through the continuing resolutions passed by Congress in September and extended in December funding overall government operations. As a result, ARC a received funding of \$155 million for fiscal 1983.

#### Operating a Changing Program

At the same time that the Commission was moving ahead to plan and refine its new program, it was also continuing the last year of funding under the traditional program. Typical activities of the year are described briefly below. Most of the projects initiated during the year are in line with ARC's new finish-up emphases, but some (the upgrading of vocational education teachers in Mississippi and the maternal health care project in Coshocton County, Ohio, for instance) are examples of projects that will no longer be eligible under the new program.

Highway Construction. Of the total 3,025 miles authorized in the Appalachian Development Highway System, construction was under way or completed on 1,863.8 miles by September 30, 1982, and 1,660.2 miles were open o traffic. On the Appalachian access road system, construction was under way or completed on 745.8 miles.

LDD Survey. During the year ARC conducted a survey of its 69 local development districts (LDDs). The survey, which dealt with the impact of budget cuts on the districts, revealed that 49 percent of LDD board members were businessmen. Earlier surveys had shown that 63 percent of board members were locally elected officials, many of them business leaders serving in partitime public positions.

According to the survey, federal funding for district administration from FY 81 to FY 82 dropped an average of 17 percent, a drop offset to some degree by a 13.2 percent increase in state funding and a 19.6 percent increase in local funding. However, total staffing of the districts was cut 23 percent because of the funding changes.

To help make up for these losses, many districts collected fees for services once provided free to local governments. New services were also offered on a fee or cost basis, to businesses as well as local governments. Further, districts successfully sought support from private foundations and philanthropic institutions.

Matching Doctors and Communities. ARC established the Appalachian Health Professions Clearinghouse, headquartered in Washington and operated by the ARC staff, to refer healthcare professionals to practices in Appalachia and to help Appalachian communities find the health care providers they need. Operated with federal and state funds with no fee charged to health professionals or communities, the clearinghouse has used newsletters and brochures to make its services known to communities and providers. A special target of its publicity has been the medical students and residents who have received loans from the National Health Service Corps for their medical education and must repay these loans by serving health manpower shortage areas. Although the clearinghouse aims its efforts primarily at physicians, it also helps place dentists, nurse practitioners and physician assistants.

Some Appalachian states have actively participated in clearinghouse activities by estal lishing state recruitment offices through which clearing house efforts are channeled. These offices maintain up-to-date information on the communities that have the greatest health needs. They sometimes run recruitment fairs or training workshops for communities seeking health manpower.

Assisting Development of a High-Technology Corridor. A high-technology corridor in Tennessee, along the Pellissippi Parkway between Oak Ridge and the Knoxville area, will be developed with the help of \$1.2 million in ARC funds. The new nonprofit Tennessee Technology Foundation will develop the corridor, along which two high-technology businesses have already located. The ARC funds will be used for start-up costs and general administrative costs

ERIC

13.

for up to five years for the foundation, whose formation was recommended by a statewide task force of business and community leaders. The foundation will build on the technical educational base in the area, which includes the Oak Ridge National Laboratory, TVA, the University of Tennessee in Knoxville and its associated Space Institute in Tullahoma.

Plans for the project include a training institute for employees of high tech industries on a new campus for the State Technical Institute of Knoxville, to be combined with the Oak Ridge campus of Roane State Community College, and a technology business center to help entrepreneurs reach production stage.

improvement of Basic Skills. A component of the statewide basic skills improvement program and the comprehensive plan of the Alabama state department of education, this four-year-old Alabama project is designed to improve the basic skills of reading, mathematics and oral and written communication. It has granted funds to ten elementary schools. While each school has worked toward the overall objectives in a slightly different way, all have used ARC funds to supply additional teaching staff and aides, to purchase or create new-and more effective instructional materials and to find ways to volve parents in improving their children's basic skills. A special basic skills team from the state department of education has assisted all schools in the project. Achievement and basic skills tests are administered to help evaluate the effectiveness of the project.

Providing Maternal Health Care. A program was established to provide prenatal and postnatal care to low-income Coshocton County, Ohio, women who do not qualify for welfare and have inadequate or no health insurance. Health professionals in the dounty had noticed that increasing numbers of pregnant women were coming to the emergency room of the only hospital in the county to deliver without having any prenatal

uring their pregnancies. A lack of prenatal ERICs known to contribute to infant mortality

The purpose of the project is to prevent low-birth-weight babies and high-risk deliveries. Clients are provided with physical examinations, laboratory testing, nutritional assessments and counseling on pregnancy and child care.

Encouraging Business to Establish Child Care Programs. A study by Winthrop College in South Carolina explored incentives to business and industry to subsidize child care programs. The study's four major components were (1) a - housing: survey of working women in South Carolina; (2) a review of current literature on employer-supported child care; (3) on-site visits to study models of employer-supported child care; and (4) development of a marketing package to promote the concept. This marketing package is now being used by child care providers in approaching the private sector; the package includes information on tax laws, insurance, child care standards and other regulatory factors. The project was undertaken in response to recommendations from a governor's task force which had pointed out the large increase in the state over recent years in numbers of employed women and urged increased child support services to make it easier for more women to be employed.

Supplying a Clinic for a Rural Coal-Mining Area. In Floyd County, Kentucky, several small rural mining communities virtually isolated from large service centers receive basic health services from a clinic whose rented facility was recently destroyed by fire. ARC funds have helped to build and equip a clinic building to replace the mobile homes adapted and temporarily used by the clinic. This community of 13,000 raised \$80,000 to contribute to the cost of the permanent building.

Promoting Conversion to Coal. In FY 82, ARC developed a guidebook to help small and medium-sized industries make the decisions necessary to convert to the use of coal for electricity or heating. It also helped disseminate information on conversion at the state and local levels, working, for example, with a local devel-

opment district in southeastern Pennsylvania.

Rehabilitating Rural Housing. ARC provided \$250,000 to the Regional Housing Council of Southern Tier New York for a demonstration project in the rehabilitation of rural housing through the combined use of public and private funds. The \$250,000 in ARC funds will permit \$550,000 to be borrowed at reduced interest rates for the rehabilitation of three types of rural housing:

- 1. rental properties housing 1-4 families
- 2. larger homes owned and occupied by an elderly person or persons, to be converted into 2-4 family units
- 3. properties foreclosed for tax delinquency.

The overall purpose of the project is to restore to good condition some of the essentially sound housing stock of rural New York and thereby increase the supply of good housing available at reasonable rates to rural residents.

Upgrading Vocational Education Teachers. In the 20 Appalachian counties of Mississippi, the number of vocational education teachers tripled during the ten years from 1969 to 1979 as a result of the ARC emphasis on establishing vocational education facilities. In order to upgrade the training and development of teachers, especially new teachers, the state division of vocational technical education has received a three-year grant from ARC for in-service training. The program is offered at local vocational centers and off-campus locations of Mississippi State University."

This pilot project is intended eventually to be extended to other areas of the state. An effective riechanism for raising the level of vocational education, the project has developed such innovations as preparation of a directory listing industries in Appalachian Mississippi that are willing to help train vocational education teachers by letting them actually work at the industries for short periods and take part in company training programs.

Making Use of New SBA Program. More than 20 Appalachian local development districts (LDDs) made use of a felatively new Small Business Administration program to set up organizations during the year that would qualify as certified development companies (CDCs). The purpose of this joint government/private-sector program is to make it possible for small businesses to obtain financing for the acquisition of land, construction and equipment. Loans can be made for up to 25 years, the type of long-term financing which is often difficult for small businesses to get.

Once it has set up a CDC, a development district can often put together a financing package to help a small bus ness obtain better terms than otherwise available. SBA can guarantee a maximum of \$500,000 of bonds in any one package arranged through a CDC. The development districts expect eventually to make their CDCs self supporting, largely through the packaging fees they are allowed to charge.

This program constitutes a valuable development tool that is expected to help create jobs as ... il as to aid in city and areawide development.

Assisting Small Coal Producers. In order to help small and medium-sized coal producers to take better advantage of the coal export market, ARC offered technical assistance during the year in several forms. The Commission prepared a series of five reports analyzing export opportunities, the structure of the export market and port capacity problems. It provided staff and financial support for a number of seminars and conferences throughout Appalachia on the same topics. It helped to organize a cooperative of small and medium-sized coal producers in eastern Kentucky which negotiated the sale of almost half a million tons of coal to italy.

Appalachian Foundation

Throughout the year the Commission explored initiatives that would lead to creation of an Appalachian foundation. The Commission was interested in launching a cooperative public private effort to build a pool of capital that could be used, along with other kinds of assistance, on.

specific efforts for the development of the Region to complement the work of ARC. In earlier decades, much of the wealth generated by Appalachia's natural resources had been extracted from the Region without much benefit to the Appalachian people. Many corporations and individuals have shown an increasing commitment to the communities where they are doing business.

The Commission allocated \$600,000 during the year to launch the Foundation and fund its first year operating costs. It also appointed a Foundation committee composed of the federal cochairman and representatives of five Appalachian states (Kentucky, Mississippi, Ohio, Tennessee and West Virginia); this committee was directed to prepare and file final incorporation documents.

(The Foundation's articles of incorporation were filed in Virginia on January 28, 1983, after the conclusion of fiscal 1982. An initial board was designated consisting of the federal cochairman and the current and preceding states' cochairmen. This initial board was given responsibility for approving the Foundation's bylaws and electing to the board of directors not fewer than 14 directors in addition to the 13 Appalachian governors.)

#### The Finish-Up Program

The finishup program, launched at the end of fiscal year 1982, was designed to help the Region make the transition from dependence on assistance furnished by ARC to the point where it could continue to make economic progress without the assistance. The program called for specific goals. Within three years the basic health program was expected to be completed. Special assistance to the most distressed counties and a regionwide program to create and retain jobs and stimulate private investment was planned for five years. Completion of the most vital uncompleted highway segments was scheduled for eight years.

Changes in the Highway Program. Completion of the total planned 3,033 mile Appalachian

Development Highway System would cost approximately an additional \$7 billion in federal funds, according to estimates in late 1981, but this level of federal funding did not seem achievable. The finish up program, therefore, provides for construction of only 666 of the remaining 1,303 uncompleted miles. The criteria for segments to be selected for construction were developed by negotiation among the states and the federal cochairman in the usual ARC process. The segments to be constructed include:

• segments within each state carrying the highest overall traffic and contributing the most to economic development

• segments eliminating the most restrictive gaps in continuity of the system

• segments expected to carry the most coal traffic by 1985

 segments completing the most critical crossings of state lines.

For completion of 550 miles, a ceiling of \$2.27 billion in federal funds was set. The Appalachian states committed themselves to building an additional 116 miles of the system essentially with other resources.

The modified highway program would:

 complete approximately 79 percent of the authorized system, for a total of about 2,400 miles of improved highway

 construct the 150 miles of highway segments carrying the largest volumes of coal

leave 26 state-line crossings in adequate condition

 virtually complete 10 corridors of the 26 in the system.

Changes In the Area Development Program. The bulk of ARC area development funds—nearly 75 percent of the total—will be used for the jobs and private investment part of the program. A limit of 50 percent of the total cost is established as the maximum ARC funding permissible in projects under the jobs and private investment program and the health finish-up program. Some projects formerly eligible for ARC funding are no longer eligible: libraries, cultural centers or recreation facilities; construction of schools,

ERIC Full Text Provided by ERIC

hospitals or government office buildings; construction of community centers or social service facilities, except for primary care facilities under the health finish up program, facilities eligible under the distressed counties program and facilities for industry-related child care under the jobs and private investment program; operational assistance beyond start-up and the first year of operations.

Jobs and Private Investment Program. This program will fund projects supporting the creation and retention of private-sector jobs, upgrading manpower for jobs in the Region and stimulating private-sector investment. All 397 Appalachian counties are eligible for funding of projects under this jobs'and private investment program. All projects selected for support must provide evidence of private-sector investment, such as monetary contributions, donation of space, expertise or equipment, investment in a related project as a result of project activities, or corporate or community leadership and involvement in planning and implementing project activities.

Eligible activities are those that involve: .

- creation and retention of jobs, where Commission funds are necessary to assure a firm private-sector commitment to locate, expand or stay in the area
- upgrading manpower for jobs in the Region, where Commission funds will initiate training that is relevant to the current job market or improve basic skills necessary to qualify for jobs
- attracting private investments, where Commission funds are necessary to bring about specific private investments that will meet high-priority objectives substantially enhancing the economic development potential of an area.

.Projects eligible for funding under this program include:

 infrastructure projects, such as access roads, water and sewer improvements or other community facilities for or supporting enterprise sites

human resources projects of the following types:

RIC berefevant training programs, including

training or upgrading to improve immediate job prospects

2. basic skills programs for adults or secondarylevel vocational students to improve reading, writing, computational or basic computer literacy skills in direct preparation for employment or graduation

 child-care programs to meet the needs of specific industries and their employees, including construction of facilities and establishment or adaptation of programs

4. housing programs needed to support or expand business and industry

5. enterprise development programs, such as assistance in developing coal marketing and exports strategies, technical assistance for small business development and energy enterprise revolving loan funds.

Funds allocated to the jobs and private investment program for fiscal 1983 total \$34.3 million.

Distressed Counties Program. This special program is designed to help Appalachians who live in the most distressed and underdeveloped counties in the Region (see list on page 6). More than one million Appalachians live in these 67 counties, where many communities lack even the most basic facilities and the resources to provide them. Gnemployment and poverty rates are high and housing inadequate in these largely rural counties.

Four indicators were used to identify the 67. counties eligible under this program: per capita income, unemployment, poverty and infant mortality. Counties included fall in the bottom quarter of Appalachian counties in at least three of these four categories.

Funds under this program will be used chiefly to provide safe drinking water and affordable waste disposal, to give these counties a basis for hope of progress in the future. Funds can also be used for activities eligible under the jobs and private investment program.

Funds allocated to this program, for fiscal 1983 total \$9.6 million.

Health Finish-Up Program. This program is de-

signed to complete within three years the ARC objectives of bringing primary health care within reasonable commuting distance of people in the Region, of reducing infant mortality in counties with the worst rates and of recruiting needed health manpower in shortage areas.

Counties eligible for primary care projects, listed on page 7, were selected on the basis of being areas short in health manpower (as designated by the Department of Health and Human Services) that lacked primary care or coverage from nearby areas. Counties eligible for infant mortality reduction projects, listed on page 7, were selected on the basis of having infant mortality rates for the years 1977-79 that were 150 percent of the national average, or more.

This program will fund:

- primary care projects that provide reasonable access—generally within 30 minutes, under normal conditions—to basic day-to-day health care by a physician, physician extender, or nurse, for the general population of health manpower shortage areas. Primary care is defined as family-oriented entry-level ambulatory care and assumes responsibility for diagnosis, treatment, follow-up and referrals to more specialized services. It may include dental, preventive and home health care in addition to basic health care. Eligible—projects include establishing clinics, extending outreach or satellite services and assisting recruitment of primary care physicians.
- projects to reduce infant mortality. Eligible activities will include training courses, public education programs and prenatal services.
- recruitment technical assistance projects to help place needed health providers in health manpower shortage areas throughout the Regions

Funds allocated to this program for fiscal - 1983 total \$5.1 million.

Finish-Up Program Objectives. The ARC finishup program cannot complete the job of bringing Appalachia fully into the mainstream of the American economy. Gaps will still remain between Appalachian and national levels of income, community services, jobs, housing, health and education, but the finish-up program will further narrow many of these gaps. It is expected to complete in an orderly fashion ARC efforts now in progress. And it will leave in place in the Region a solid base for continuing development.

#### **Finances**

In the 18 years the Appalachian Regional Commission has been in existence, Congress has appropriated a total of nearly \$4.9 billion for the Appalachian program, through September 30, 1983 (see Table 1 at right). Of this total, \$3.0 billion has been for the highway program and \$1.9 billion for the nonhighway program.

### Authorizations and Appropriations

The federal share of ARC funding is provided by Congress in two stages, first authorizations and then appropriations, as is the case with most federal programs. Authorizations establish both the scope of program activities and the maximum limits on amounts that may be made available to carry out these programs. For the Appalachian program, authorizations of funds for the nonhighway portion of the program have been provided for two year periods, and for the highway program for longer periods, usually four to five years.

Within the ceilings established by the authorizations, Congress then provides annual appropriations for the Appalachian program, generally not for the full amounts authorized.

#### **Highway Funds**

The original amount authorized for the ARC highway program in 1965, was \$840 million and covered a six-year period, to 1971 (see Table 2 on page 9). Since that time Congress has raised the total authorization to \$3,140 million through 1982 as more miles have been added to the system and as the costs of construction have risen with inflation. Neither the original authorization nor the increased fund-

ing, however, would be enough to complete the system. The total amount actually appropriated to date for highways, through fiscal 1982, is \$2.9 billion.

#### Nonhighway Funds

Appalachian nonhighway funds have been

used for a number of programs, including health, vocational and other education, mine area restoration, housing, water and sewer treatment, other community facilities, land stabilization, timber development, support of the multicounty local development districts (LDDs), research and supplemental grants. Originally, these funds were allocated to each state in a specific amount for each program

#### Appalachian Highway Authorizations

(in militions of dollars)

		`•	Amount of	Authorization

1965 Act	through .	1971	\$840.0 J	\$ 840.0
1967 Amendments	through	1971	175.0	1,015,0
1969 Amendments	through	1973	150.0	1,165.0
1971 Amendments	through:	<b>3</b> 1978	925.0	2.090.0
1975 Amendments	through -	1981	84 <del>0</del> .0	2.930.0
1980 Amendments	through	1982	260.0	3,190.0
1982 Reconciliation Act	through	1982	-50.0	3,140.0

Cumulative authorization through 1982, \$3,140 million, Cumulative appropriation through 1982, \$2,887.6 million.

then in existence. in 1971, Congress changed this system of authorization by allocating the nonhighway funds as a block. In response to this Congressional action, which gave the Commission greater flexibility in investing its funds according to individual state priorities, the Commission designed a new allocation system under which each state was given a single allocation, called an area development allocation, for four major programs: health and child development, vocational education, mine area reclamation and supplemental grants. Each state could-determine how much of its area development allocation it wanted to use for each of these programs.

Since 1975, this single allocation system has expanded to cover all ARC nonhighway programs, except for Commission research and evaluation and the support of the LDDs.

The area development appropriation is divided among the states according to a formula that takes into account the land area, the population and the per capita income of the Appalation portion of each state.

#### Sources of Funding

The commitment of the federal-state partners to the ARC process is demonstrated by the fact that the responsibility for funding is shared just as the decision making process is. Appalachian and other federal funds have made up 61 percent of the total costs of all Appalachian projects (63 percent of highway projects and 59.5 percent of nonhighway projects—see Table 3 on page 10). The remainder of the costs has been paid by state, local and/or private funds, so that the federal government on the one hand and state, local and private funds on the other have invested close to equally in the program.

Over the years, the federal share of funding for grant-in-aid projects has been increased by legislation, and this increase is reflected in the Appalachian program. During the initial years, the federal share of the ARC highway program was slightly over 50 percent, but rose to 80 percent in fiscal 1982. The federal share of the

nonhighway funding has also risen over the years, although not so steeply—from an original share of about 50 percent to 63.8 percent in fiscal 1982 and 59.5 percent on a cumulative basis.

#### Supplemental Grants

Because of their rural character, their relative poverty and their low tax bases, many Appalachian states and communities found it difficult to come up with the matching share required by law in many programs before federal funds can be granted. Although they were eligible in all other ways for grants for the construction of basic public facilities, before the existence of ARC they often could not take advantage of a number of federal programs.

In response to this problem, Congress designed a unique feature of the Appalachian legislation, the supplemental grant program. Under this program, the federal share in grant programs may be raised (from the usual 30 to 66 percent) to as much as 80 percent of the

cost of construction, so that the state or community can participate by putting up as little as 20 percent as its matching share. The Appalachian states have used supplemental grants to construct many types of public facilities, including vocational education schools, colleges, health facilities, water systems, sewage treatment plants, recreational facilities, libraries and airports.

Each year the Commission utilizes supplemental grant funds in a slightly different manner, in accordance with priorities determined Table 4 on page 11). The proportion used for water, sewer and sewage treatment facilities. which previously amounted to about 20 percent of these funds, rose steadily-from 38 percent in fiscal year 1973 to nearly 70 percent in fiscal year 1978--and then dropped to 52 percent by 1981; in 1982 it was up again to 66 percent. In 1982, industrial site development and community improvement utilized 24 percent of these funds, as compared to 21 percent in 1979 and 33 percent in 1981.

Health facilities, on the other hand, which

at the time by the Appalachian states (see Lonce accounted for about 26 percent of these funds, utilized about 17 percent in 1975 and dropped to less than 2 percent in 1980 and less than 1 percent in 1981 and 1982. The share of education projects has dropped from an earlier 57 percent to somewhat more than 7 percent in the 1980-82 years.

> It should be noted, however, that these amounts do not reflect completely the amounts of ARC funds used for construction of health and vocational education facilities since these may also be funded under ARC's basic health and vocational education programs.
